	BUS & MINI BUS RESERVATION BLUE/WHITE 3mm	TP-127
	BICYCLE PARKING RESERVATION BLUE/WHITE 3mm	TP-128

Application:

1. Surface Cleaning :

- Remove all dust, dirt, oil, and moisture from the surface.
- Use a broom, blower, or pressure washer as needed.
- The surface must be completely clean and dry.

2. Positioning :

- Mark the installation area using measuring tape and chalk or cones.
- Ensure proper alignment before proceeding.

3. Primer coating :

Special foundation paint (primer) from Tameer paints to organize for you the best quality and the strongest adhesion.

4. Preheating the Surface :

- Use a gas torch to gently preheat the ground, especially if it's cold.
- Do not overheat one area to avoid damage to the surface.

5.Placing the Preform :

- Place the thermoplastic preform sheet in the marked location.
- Make sure the reflective side is facing up.
- You can temporarily secure it to prevent movement.

6. Heating the Preform :

- Direct the flame onto the preform and heat it evenly.
- Move the torch continuously until:
- The edges begin to melt.
- The sheet adheres to the surface.
- A light glossy appearance forms on the surface.

7. Sprinkling Glass Beads :

- Before the preform cools down, hand-sprinkle glass beads evenly across the surface.
- This provides nighttime reflectivity.

8. Cooling :

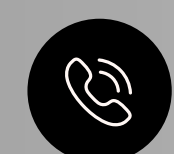

- Allow the material to cool completely (usually just a few minutes).
- Do not allow traffic or pedestrians until it's fully hardened.

You can request the production of any logo or guidance signal that is not in the catalog.
